ABSTRACT:

PROBLEM TO BE SOLVED: To provide a connected risk management data base system gathering data in a connected base including a present company and affiliated companies and retrieving credit/business risks, country risks, market risks and financial derivative risks for the present company and the affiliated companies respectively.

SOLUTION: The connected risk management data base system 1 provided with a

retrieving system 2, a reporting system 3 and a connected risk management data base 4, receives electronic information regarding risks in a fixed format through the reporting system 3 and constructs the connected risk management data base 4. By the retrieving system 2, the various kinds of risk information are gathered and retrieved from data stored in the data base 4.
